

Training in Madrid on the latest Yokis news

Golmar gave last September 18th a training to 38 installer companies in APIEM.

The event consisted of a theoretical and practical training of the new home automation applications: **Yokis PRO** and **YOKIS YnO**. As well as the Mininote+ video door entry kit that allows you to manage the activations through its **CX-MODO** monitor.

The training aroused great expectation among the attendees, in which there was a great interest in knowing and putting into practice the latest advances.

We would like to thank those who attended the training and hope to meet them again.
