

Intersec 2020

Golmar has participated in the Intersec 2020 fair in Dubai. Intersec is the most important event in the residential and commercial security sector. The Intersec fair has a great impact on the markets of the Gulf, Africa and Central Asia.

At this fair, Golmar has presented its new two-wire residential video intercom product line called G2+ and IP technology under the commercial name G+.

G2+ is a 2-wire technology, available in kits such as Soul kits and in its variant for buildings with the Nexa entry panel. G2+ technology is the result of years of experience and application of 2-wire technology, taking advantage of all the benefits of a simplified installation and being suitable for replacement. In addition, G2+ technology is presented as a connected technology, since **Art7W** monitors, thanks to its Wi-Fi connection, allow the user to receive calls to the mobile terminal through the G2Call application, available in Android and iPhone versions.

One of the main introductions in this event has been the IP G+ video intercom technology. Golmar has offered in the last decade IP video intercoms equipment in the countries of this region, where the size of the projects require large capacity video intercoms that allows connection through wired or fiber optic networks. G+ technology is the culmination of a decade of market presence in this segment, with a line of products that meet all the demands and needs of users and neighboring communities. Like 2-wire technology, IP video intercom technology called G + is also presented as a connected video intercom technology. Through the Art7W/G + monitors it is possible to have a video intercom connected through the Wifi router at home, being able to receive calls to our floor with the use of the G2Call application on our smartphone.

Golmar has presented itself at the fair as an innovative company, aware of the needs of a market that increasingly requires a fully connected system.
